Using & Building Cross Platform Components with Xamarin

Check out the Gone Mobile Podcast! <http://GoneMobile.io>

Component Store: 101

- Launched early 2013
- Now 100+ components published
- Themes, Controls, Libraries
- Visual Studio + Xamarin Studio Support

components.xamarin.com

Why?

- Monetization
- Xamarin Studio
- Support

Yabut... NuGet?

- Technically, it already works!
 - v2.5 (April 2013) MonoAndroid, MonoTouch, MonoMac
- Lack of documentation for Xamarin/Mono
- No official Xamarin Studio Add-In
 - 3rd party Add-In *is* available
- Get Paid

Shameless Plug(s)

These are my components:

AndHUD

ZXing.Net.Mobile

Eggs To Go

How to Use Components

(it's really, really easy)

Building your own Components

- Write your code first
- Really just about organizing your code
- Login to Component Store with your Xamarin account
 - Submit a Component
 - Download the Packaging tools (always latest)
 - Read the Packaging Guidelines

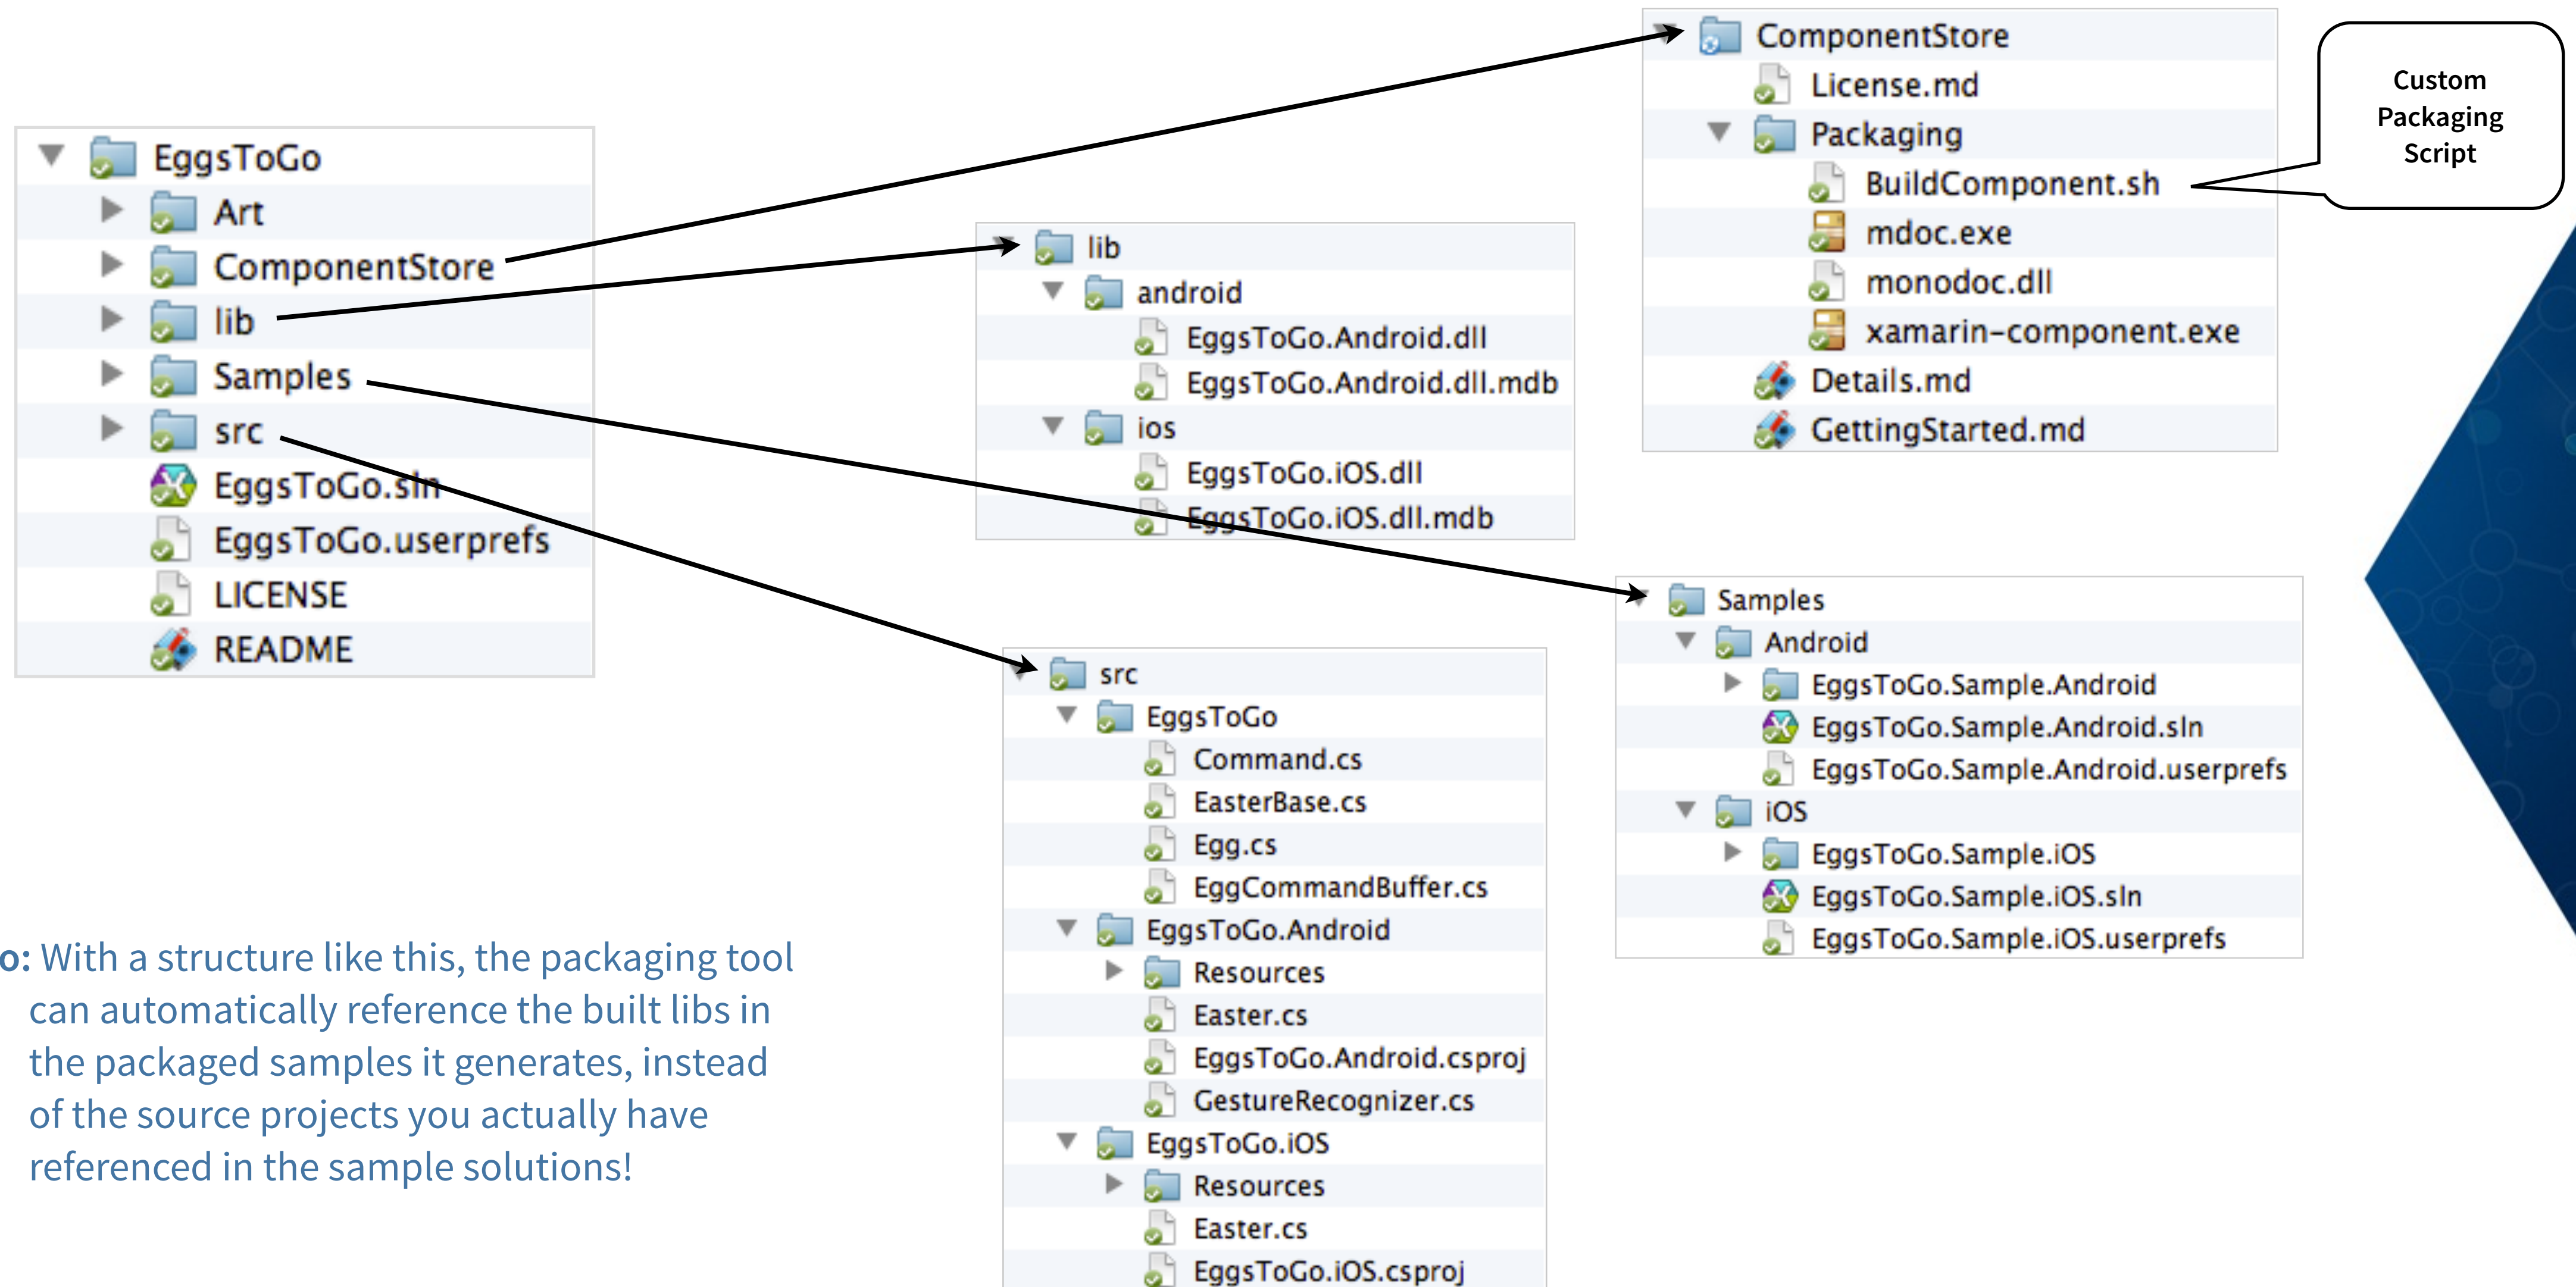

Packaging Guidelines

- **Markdown Files**
 - **Details.md** - Displayed on Component Store
 - **GettingStarted.md** - Should be concise, displayed when installed
 - **License.md** - Apache 2.0 is recommended
- **Icons** - Not pre-rendered
 - **128 x 128 .png file**
 - **512 x 512 .png file**
- **Other things for Submission (not in package file)**
 - **Screencast/Video** - Optional (YouTube, Vimeo, Screencast.com)
 - **Slideshow Images** - Optional (740x400)

Paid Components

- **Separate Trial version package**
- **Component Vendor Agreement**
- **Xamarin Handles Transaction Fees / Processing**
- **Paid by Xamarin**

Folder Structure

Packaging Script

```
mono xamarin-component.exe create-manually EggsToGo-1.0.xam \
--name="Eggs-To-Go" \
--summary="Cross platform mobile library for implementing Easter Egg gestures" \
--publisher="Redth" \
--website="https://github.com/Redth/EggsToGo" \
--docs="https://github.com/Redth/EggsToGo" \
--srcurl="https://github.com/Redth/EggsToGo" \
--details="../Details.md" \
--license="../License.md" \
--getting-started="../GettingStarted.md" \
--icon="../Art/EggsToGo_128x128.png" \
--icon="../Art/EggsToGo_512x512.png" \
--library="ios":"../lib/ios/EggsToGo.iOS.dll" \
--library="android":"../lib/android/EggsToGo.Android.dll" \
--sample="EggsToGo iOS Sample. Demonstrates how to implement Easter Eggs in an iOS application":"../Samples/iOS/EggsToGo.Sample.iOS.sln" \
--sample="EggsToGo Android Sample. Demonstrates how to implement Easter Eggs in an Android application":"../Samples/Android/EggsToGo.Sample.Android.sln"
```

Test your .XAM Component file after!

Let's build one!

(it's also really, really easy)

Q&A

All the things

- Me - <http://redth.info> - <http://github.com/Redth> - @redth
- Eggs-To-Go - <https://components.xamarin.com/view/EggsToGo/>
- AndHUD - <https://components.xamarin.com/view/AndHUD/>
- ZXing.Net.Mobile - <http://components.xamarin.com/view/zxing.net.mobile/>
- Component Store: <http://components.xamarin.com>

The background is a dark blue gradient with a complex network of glowing nodes and lines. The nodes are small circles in various shades of blue, green, and yellow, connected by thin, light-colored lines, creating a sense of a digital or molecular structure. The overall effect is a modern, tech-inspired aesthetic.

THANK YOU
